This chapter contains the following information:

- Overview
- Configuration Options

This chapter will give a brief overview on configuring Real Player Gold 10 for maximum accessibility.

**Overview**

Similar to Windows Media Player, a few defaults need to be setup in RealPlayer to ensure maximum accessibility “out-of-the-box” for individuals with disabilities.

**Configuration Options**

Make sure that you have the latest version of RealPlayer installed. After installing the software, complete the following steps to ensure accessibility:

1. Start Windows Media Player
2. Select “Tools”, and then “Preferences” in the main toolbar.
3. It is recommended that RealPlayer only start up with the player itself, due to the possibility that the content in the media browser may not be accessible. To complete this, in the “General” category, select “Player only” under the option “On startup display”.

4. Next, navigate to the “Content” category, and turn on both options under “Accessibility”, ensuring access for individuals with hearing impairments.
Configuring RealPlayer Gold 10

In the Preferences window, the Content category is selected. The Clip Cache setting allows users to store frequently played clips temporarily in a special file for quick access later. The Language section permits users to choose a preferred language for content, with an option to use subtitles or overdub tracks when the primary language is not available. The Parental Controls function lets users restrict access to certain content, while Accessibility options include supplemental text captioning and descriptive audio when available.
