This chapter contains the following information:

- Overview
- Configuration Options

This chapter will give a brief overview on configuring Real Player Gold 10 for maximum accessibility.

**Overview**

Similar to Windows Media Player, a few defaults need to be setup in RealPlayer to ensure maximum accessibility “out-of-the-box” for individuals with disabilities.

**Configuration Options**

Make sure that you have the latest version of RealPlayer installed. After installing the software, complete the following steps to ensure accessibility:

1. Start Windows Media Player
2. Select “Tools”, and then “Preferences” in the main toolbar.
3. It is recommended that RealPlayer only start up with the player itself, due to the possibility that the content in the media browser may not be accessible. To complete this, in the “General” category, select “Player only” under the option “On startup display”.

Next, navigate to the "Content" category, and turn on both options under "Accessibility", ensuring access for individuals with hearing impairments.
Configuring RealPlayer Gold 10

Preferences window showing the Content category with options for Clip Cache, Language, Parental Controls, and Accessibility. The Clip Cache section explains that some clips you play frequently are stored temporarily in a special file for quick access later. The Language section allows you to choose the preferred language for content and playback method. Parental Controls let you restrict access to certain content. Accessibility options include using supplemental text captioning and descriptive audio.
