Assistive Technology, is, in a nutshell, technology for persons with disabilities. For example, there is a piece of software called “JAWS” that is a screen-reader, which literally reads the contents of the screen aloud for blind individuals. There are many other software packages and hardware devices we work with and attempt to provide to departments, students, and even faculty and staff to increase the accessibility to this institution for everyone.

Our goal is to provide this technology in the most ubiquitous, well-supported environments possible, allowing for OSU's students with disabilities the technology they need to get the best education possible.

**STUDENTS INFORMATION**

- Find out how to get Training
- Join the Assistive-L E-mail Discussion List
- Locate a Lab Near You (Coming Soon!)
- Find more information about:
  - JAWS 11.0 - Screen Reading for the Blind
  - OpenBook 8.0 - Document Scanning for the Blind
  - Dragon NaturallySpeaking 10.0 - Speech-To-Text for Mobility or Cognitive Impairments
